

dTIMS OM includes the following key features:

Data Collection

Collect or inspect assets using the dTIMS Data Collection App or an external app linked to the dTIMS common asset repository.

Activities

Develop work orders based on e-mail notifications or other logic that match your agency's maintenance operations.

Scheduling

Assign crews and employees to work orders and geographically schedule work.

Resource Management

Track your employee performance for tasks, when tasks are completed, and employee performance.

Preventative Maintenance

Keep your assets and the equipment that supports those assets at an acceptable level of service.

Enterprise Integration

Integrate with dTIMS BA, dTIMS BI, GIS, financial, 311, and other legacy systems in your enterprise.

Day-to-Day Asset Management.

dTIMS Operations Management (OM) helps agencies track, manage, and maintain the day-to-day maintenance of their assets. Develop work plans for preventative, predictive, routine, and unplanned maintenance activities, that encompass your entire asset network. Once complete, managers can view performance and past due work reports.

dTIMS OM encompasses all of your assets in a common asset repository that is designed to allow every department in your agency to store and retrieve reliable, accessible, and easily shared information in real-time.

About Deighton.

Deighton Associates Limited (Deighton) has established itself as one of the world leaders in providing asset management systems and asset management expertise at the strategic, tactical, and operational levels for agencies around the world. Recognized as the premier software product for infrastructure asset management, dTIMS® is used to manage large infrastructure networks in Africa, Asia, Australia, Canada, Europe, New Zealand, and the United States. These infrastructure networks include hundreds of thousands of miles of pavements, thousands of bridges, and millions of wastewater, storm water, and fresh water distribution pipe assets.
